DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-14, 16-20 & 41-47 are rejected under 35 U.S.C. 103(a) as being unpatentable over MacAnally et al. (USPN 4,752,922) and in view of Yamanaka (USPN 6,266,302) and Liu et al. (USPN 6,580,054).

MacAnally et al. discloses a laser system having an astigmatic focusing system, collimation and expansion of the beam(s), the use of a collimator telescope, lens and the formation of multiple focal points.

MacAnally et al. does not specifically teach convergence.

Yamanaka discloses an optical device, which uses an astigmatic element placed in a convergent optical system for focusing the beam and emitting an astigmatic beam.

It would have been obvious to one of ordinary skill in the art at the time of the invention to use convergence as taught by Yamanaka in the MacAnally et al. process because it fully tailors the beam and hence optimizes the cutting area.

MacAnally et al. and Yamanaka do not teach a solid-state laser, UV, pulse durations or the processing of a sapphire substrate.

Liu et al. discloses a process for scribing sapphire substrates using a solid-state laser, which emits UV pulses. GaN is manufactured on the sapphire surface. Laser pulses of 10 to 30 nanoseconds, with a spot size of 5 to 25 microns are used to process the substrate. Grooves of about 40 microns are cut into the substrate and debris is removed using an exhaust system.

It would have been obvious to one of ordinary skill in the art at the time of the invention to use sapphire, a solid state UV laser and noted the pulse durations, as taught by Liu et al. in the MacAnally et al. and Yamanaka process because these are merely variations of laser types and the recording of data and parameters, in order to characterize the process operation.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over MacAnally et al., Yamanaka and Liu et al., as stated in the above paragraph and further in view of Snyder (USPN 5,181,224).

MacAnally et al. and Yamanaka do not teach the type of lens in the system.

Snyder discloses a laser system, which works with astigmatism features in laser processing. Plano convex and convex-concave devices are used to collimate the laser beam.

It would have been obvious to one of ordinary skill in the art at the time of the invention to use plano convex and concave devices, as taught by Snyder in the MacAnally et al., Yamanaka and Liu et al. processing because these are merely apparatus variants.

Allowable Subject Matter

Claims 48 & 49 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: the prior art does not teach a metal film of Mo or Cu and use of a surfactant.

Response to Arguments

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Application/Control Number: 10/782,741 Page 5

Art Unit: 1725

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. Alexandra Elve whose telephone number is 571-272-1173. The examiner can normally be reached on 6:30-3:00 Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick J. Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

April 3, 2006.
